

DIANA develops tailor-made solutions from natural raw materials for the food industry. These products can significantly improve the sensorial and nutritional performance of foods by boosting their palatability, flavor, texture, color and smell. In addition, DIANA's nutritional concepts help to reinforce the health benefit of products by using functional actives.

DIANA collaborates with its clients from the food, pet food, nutraceuticals and aquaculture industries. Driven by its unique expertise in biosciences and coupled with major strategic investments in innovation, DIANA works alongside its customers to continually open up new markets.

DIANA is organized in four business units, which correspond to its targeted markets: Food, Pet Food, Aquaculture and Nova.
